

BULETIN VETERINER UDAYANA

- UTILIZATION OF BROILER CHICKEN BYPRODUCT (ABDOMINAL FAT) AS A WOUND HEALING AGENT
- TREATMENT OF SCABIES ACCOMPANIED BY BACTERIAL PNEUMONIA IN MIX CAT
- PREVALENCE AND RISK FACTORS OF LYNXACARIOSIS IN CATS AT DENPASAR
- THE EFFECTS OF TRANSFORMATION DURATION ON THE QUANTITY OF SWINE PATHOGENIC *ESCHERICHIA COLI* ISOLATE
- TREATMENT OF *STAPHYLOCOCCUS* DISEASE IN PIGS USING A COMBINATION OF PROCABEN LA, SULPIDON, AND BIOSAN
- ANTIBODI TITER LEVELS IN LOCAL DOGS FOLLOWING RABIES VACCINATION IN PENARUNGAN VILLAGE, MENGWI DISTRICT, BADUNG REGENCY
- PREVALENCE COMPARISON OF *NEWCASTLE DISEASE VIRUS* CASES AT CHICKEN FARMS IN BLAHBATUH AND PAYANGAN SUBDISTRICTS, GIANYAR DISTRICT
- PRESERVATION OF CANINE FRONT AND HIND LIMB SPECIMENS USING PLASTINATION TECHNIQUE: IMPREGNATION PHASE IN A PASSIVE VACUUM CHAMBER
- HISTOPATHOLOGICAL ANALYSIS OF INCISION WOUND HEALING IN RATS GIVEN PLATELET RICH PLASMA DROPS FROM PIG BLOOD
- MACROSCOPIC ANALYSIS OF INCISION WOUND HEALING IN WHITE RATS TREATED WITH PLATELET-RICH PLASMA DERIVED FROM PORCINE BLOOD
- THE EFFECT OF MENIRAN EXTRACT AS AN IMUNOSTIMULATOR ON THE INCREASE OF *NEWCASTLE DISEASE* ANTIBODY TITER IN BROILERS
- IDENTIFICATION *STAPHYLOCOCCUS* ISOLATED FROM POST-WEANING PIGLET TONSILS USING THE MORPHOLOGY, COAGULASE AND VOGES-PROSKAUER TEST
- ISOLATION OF GRAM-POSITIVE BACTERIA FROM THE TONSILS OF WEANED LANDRACE PIGS BASED ON HEMOLYSIS TYPE
- NUMBER OF *COLIFORM* BACTERIAL IN THE FECES OF BROILER OF VARIOUS AGES IN BADUNG DISTRICT
- IDENTIFICATION OF *STAPHYLOCOCCUS SP.* ISOLATES FROM PIG TONSILS BASED ON MANNITOL SALT AGAR TEST
- MORPHOMETRY IN ADULT LONG-TAILED MONKEY POPULATION IN MOUNT PUSUK, NORTH LOMBOK DISTRICT
- MORPHOMETRY AND IDENTIFICATION OF HISTOLOGICAL CHARACTERISTICS OF BALI CATTLE OVARIES
- MANAGEMENT OF *NOTOEDRES CATI* AND *FELICOLA SUBROSTRATUS* INFESTATION IN A MALE CAT

BULETIN VETERINER UDAYANA

Fotografer: Drh. Deny Rahmadani Hatief, M.Si

Lutung (atau dalam bahasa lain disebut langur) merupakan kelompok monyet Dunia Lama yang membentuk genus *Trachypithecus*. Secara garis besar, lutung tersebar di dua wilayah: Asia Tenggara (India barat daya, Tiongkok selatan, Kalimantan, dan Bali) dan India selatan berikut Sri Lanka. Lutung berbadan langsing dan berekor panjang. Warna bulu (rambut) tubuhnya berlainan tergantung spesiesnya, dari hitam dan kelabu, hingga kuning emas. Jika dibandingkan dengan kakinya, tangan lutung terbilang pendek, dengan telapak yang tidak berbulu. Ukuran lutung berkisar antara 40–80 cm, dengan berat 5–15 kg; pejantan berbadan lebih besar daripada betinanya. Tonjolan di atas matanya membedakan lutung dari saudara dekatnya, surili. Lutung hidup di hutan, terutama hutan hujan. Sehari-hari bergelayutan dan melompat dari satu pohon ke pohon lainnya, lutung termasuk hewan siang (hewan diurnal), dan sangat aktif pada pagi dan sore hari. Hewan ini hidup bergerombol antara 5-20-an yang dipimpin oleh seekor jantan. Suara pejantan ini sangat nyaring, ditujukan terutama untuk mengingatkan agar kelompok lain tidak memasuki wilayahnya. Lutung termasuk herbivora yang terutama makan dedaunan, buah-buahan, dan kuncup bunga. Bahan makanan yang cenderung keras ini bisa dicerna, karena lutung memiliki empat kamar pada lambungnya. Biasanya, lutung beranak satu, dengan masa hamil tujuh bulan. Salah satu hal yang menarik dari monyet ini adalah anaknya yang berbulu keemasan, dan dipelihara oleh seluruh betina dalam kelompok. Seiring dengan bertambahnya umur, warna keemasan pada rambutnya ini akan semakin pudar berganti gelap hingga akhirnya mencapai dewasa pada umur 4-5 tahun. Hewan ini bisa hidup hingga 20 tahun.

KETENTUAN UNTUK PENULISAN NASKAH

Ketentuan Umum

- a. BuletinVeteriner Udayana memuat tulisan ilmiah dalam bidang Kedokteran Hewan dan Peternakan, berupa hasil penelitian, artikel ulas balik (*review*).
- b. Naskah/makalah harus orisinal dan belum pernah diterbitkan. Apabila diterima untuk dimuat dalam Buletin Veteriner Udayana, maka tidak boleh diterbitkan dalam majalah atau media yang lain.
2. Naskah ilmiah dicetak dengan kertas ukuran A4 pada file word (doc/docx). Naskah diketik dengan spasi menggunakan program olah kata *word for windows*, huruf *Times New Roman* ukuran huruf 12.
3. Naskah yang diterima adalah: artikel original hasil penelitian, studi kasus, systematic review dan short communication.
4. Tata cara penulisan naskah harus mengikuti template yang dapat diunduh pada: [download template BVU](#)
5. Pengiriman naskah dilakukan setiap saat dalam bentuk softcopy (file doc/docx) melalui sistem daring, panduan registrasi account dan submission dapat diunduh pada laman berikut: [Panduan Submission](#)
6. Terhadap naskah/makalah yang dikirim, redaksi berhak untuk: memuat naskah/makalah tanpa perbaikan, memuat naskah/makalah dengan perbaikan, menolak naskah/makalah. Revisi naskah oleh penulis dilakukan melalui sistem daring, dan pedoman dapat diunduh pada laman berikut: [Panduan Cek review dan Upload revisi](#)
7. Semua keputusan redaksi tidak dapat diganggu gugat dan tidak diadakan surat menyurat untuk keperluan itu.
8. Setiap naskah yang dikirim ke redaksi untuk dipublikasikan dalam Buletin Veteriner Udayana akan dipandang sebagai karya asli penulis dan bila diterima, naskah tersebut tidak diperkenankan dipublikasikan lagi secara keseluruhan ataupun sebagian tanpa seijin Buletin Veteriner Udayana.
